How we connect with our Members

—

What is health equity?

Our health equity definition:
**Everyone has a fair and just opportunity
to be as healthy as possible.**

We must remember that achieving health equity means understanding the root causes of inequities.

Fair and just

Regardless of race, ethnicity, gender, sexual orientation, gender identity, preferred language, religion, geography, income or disability status.

Healthy

A complete state of physical, mental and social well-being that is impacted by clinical and non-clinical drivers of health, including access to quality health care, education, housing, transportation and jobs.

Recognition of Racism and Discrimination

Key drivers of health outcomes, and the importance of working with communities to remove barriers to health.

Health Equity & Social Determinants of Health

Health Equity is the Goal

Everyone has a fair and just opportunity to be as healthy as possible.

Social Determinants of Health are Contributing Factors

The conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality of life outcomes and risks.

Health Equity & SDoH are closely related concepts, but they are not the same. Health Equity is the goal, and SDoH are factors that influence whether we achieve that goal.
